

1:6 Scale "X" Chair Frame Template pt. 2

<https://www.youtube.com/@e.d.t.>

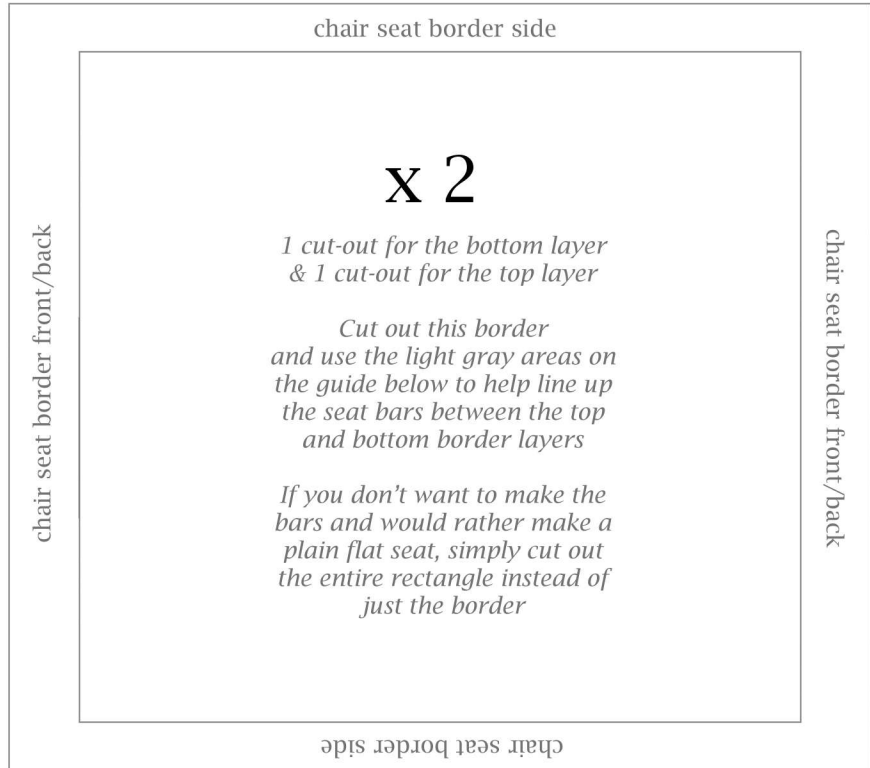

This design was intended to be made with chipboard that is approximately 1/16" thick.
Use the numbers to determine the amount of chipboard layers needed for each piece.
(example "x 6" means 6 total chipboard cut-outs)
If you use different materials, more or less layering may be needed.

chair backrest

x 3

chair seat border side

x 2

*1 cut-out for the bottom layer
& 1 cut-out for the top layer*

*Cut out this border
and use the light gray areas on
the guide below to help line up
the seat bars between the top
and bottom border layers*

*If you don't want to make the
bars and would rather make a
plain flat seat, simply cut out
the entire rectangle instead of
just the border*

chair seat border front/back

chair seat border side

seat bar

x 9
*or 9 similarly
sized craft sticks*

Use this as a guide
to help line up the seat
bars with the border
